

# **CATBOMB WHITE PAPER**

# Introduction

**CATBOMB** is an innovative GameFi project that combines a crypto game with a cat knight theme, backed by real assets, and creates positive social outcomes on Telegram. This project builds a unique ecosystem where the game blends the cat knight battles of players on various maps with the power of TON Blockchain and is driven by the cryptocurrency (\$CATBOMB), which is backed by real gold reserves. A portion of the revenue, after deducting development expenses, will be donated to various charitable projects that help children and the needy. Players will enjoy engaging competitions with the opportunity to win prizes while benefiting from tokens backed by real assets (gold) and feeling assured that their participation genuinely helps society.

The CATBOMB model is inspired by the community-funded prize competition approach of Dota 2 and uses transparent blockchain mechanisms Web 3.0, creating a sustainable and transparent ecosystem where entertainment, investment, and charity converge seamlessly.

CATBOMB is confident that there will be a large community of players and users, building on Telegram's vast user base and the charming, adorable cat knight characters we have created. Additionally, TON Blockchain technology will facilitate convenient and secure mobile transactions through applications.

Finally, the CATBOMB Team is committed to creating a GameFi game that is fun, exciting, has a good player community, and provides a safe space for communication and genuine social assistance. This is our true inspiration.

## Game Play Overview

Players will enter the world of **CATBOMB** by collecting and nurturing digital cats (NFTs), which serve as their cat knight characters in the game. Players can embark on adventures in PvE mode (fighting enemies like goblins and bats) across various beautifully designed, cute, and exciting adventure maps, and compete in PvP mode against other players for rewards. The attributes and levels of each cat affect their strength in the game, allowing players to strategize on training or upgrading their cat knight characters, as well as their outfits and weapons, to enhance their competitive performance.

The game's economy rewards players' efforts – players can earn \$CATBOMB tokens by achieving goals and winning competitions, and use these tokens to purchase new cats or participate in special events. Overall, CATBOMB is designed to be easy and

fun for casual players, but also offers strategic depth and competitive excitement for those aiming to become champions. Within this game's economy, CATBOMB will donate a portion of the revenue from its player community to society.

## Tokenomics

**\$CATBOMB** is the primary token of the CATBOMB system, designed with a fixed supply and value-supporting mechanisms. Key features and information about the token include:

- **Total Supply:** 1,000,000,000 \$CATBOMB tokens (fixed, no additional issuance).
- **Initial Price:** 0.1 THB per token at launch (approximately \$0.003 USD).
- **Gold Backing:** 40% of project revenue is used to purchase gold, creating reserves that support and stabilize the token's value.
- **Token Burn Mechanism:** 10% of revenue is used to buy back and burn \$CATBOMB tokens (sending them to an unowned address), reducing the circulating supply and increasing the value of remaining tokens over time.
- **Usage:** \$CATBOMB is used as in-game currency for purchasing NFT assets (such as cat loot boxes) and paying tournament entry fees. It is also awarded to players for gameplay and will grant holders governance voting rights for the project in the future.

## Token Overview

CATBOMB is the primary token of the CatBomb system, operating on The Open Network (TON) blockchain. It has a total fixed supply of 1,000,000,000 tokens, with no future increases. CATBOMB tokens are developed according to TON standards and are used both as in-game currency and as governance/reward tokens for the community. TON offers fast transaction rates and very low fees, ensuring smooth transactions within the CatBomb game. Players can efficiently trade items or transfer tokens without interruptions. Additionally, with a fixed supply and a token burn mechanism (to be

explained later), CATBOMB tokens are likely to become deflationary assets, increasing in value over time as the platform grows.

## Revenue Distribution

CatBomb reinvests game revenue back into its economy to benefit players, projects, and token value in a balanced manner as follows:

- **40% – Purchase Gold (XAUt):** 40% of the total game revenue will be used to purchase XAUt (Tether Gold), a stablecoin backed by real gold. 1 XAUt is equivalent to 1 troy ounce of pure gold. The acquired gold will be kept as reserves to back various in-game assets (such as NFTs) and enhance the stability of CatBomb's economy.
- **30% – Team:** 30% of the revenue is allocated to the team for development, operations, and continuous improvement of the game. This ensures the project has the resources to elevate the gaming experience and sustain its operations.
- **20% – Player Rewards:** 20% of the game revenue will be redistributed to the community through in-game rewards, staking returns, or special events. This mechanism rewards players and token holders who engage with the platform, aligning player success with the game's success.
- **10% – Token Burn:** 10% of the revenue will be used to burn CATBOMB tokens monthly, permanently removing these tokens from circulation.

This revenue distribution model creates a supportive cycle: purchasing gold increases reserves and system stability, the team has funds for ongoing platform development, players receive tangible rewards for participation, and token supply is consistently reduced. Overall, this mechanism balances growth, rewards, and long-term sustainability for CatBomb's economy.

## Airdrop and Vesting Program

To foster community engagement from the outset and reward early supporters, CatBomb has organized an airdrop event along with a vesting period to ensure fairness and market stability during the launch phase. Participants in the airdrop will receive free CATBOMB tokens as specified, but the release of these tokens will be staggered over time instead of being received all at once to prevent mass selling. The details are as follows:

- **Token Generation Event (TGE):** At the initial token launch, airdrop recipients can immediately claim only 30% of the total tokens allocated to them at the time of TGE.
- **Unlocking Remaining Tokens:** The remaining 70% of the tokens will be locked and unlocked after 3 months (e.g., if someone receives 10,000 CATBOMB tokens through the airdrop, they can claim 3,000 tokens during TGE and the remaining 7,000 tokens after three months).

This distribution and unlocking structure helps prevent large-scale token sales immediately upon launch, which could negatively impact market prices. It also encourages airdrop recipients to stay engaged and follow the project's development at least during the initial launch phase. This system reflects the team's commitment to creating long-term value for the token. Holders will receive their full entitlement over time, with the smart contracts on TON automatically managing the locking and unlocking process transparently, allowing stakeholders to verify it.

## Token Allocation & Vesting

The allocation of the total 1,000,000,000 CATBOMB tokens has been carefully planned to distribute tokens in a balanced manner among project participants and to meet long-term needs. The details of the allocation and unlocking plan are as follows:

- **Team: 15% (150,000,000 tokens)** – Reserved for the founding team and core development team of the project to align the team's interests with the project's success. These tokens will be locked for a specified period (e.g., they may be non-transferable for the first 12 months and gradually unlocked monthly over the next 12-24 months), ensuring the team is motivated to create long-term value.
- **VC/Strategic Investors: 10% (100,000,000 tokens)** – Allocated to early investors and strategic partners who supported the project from the beginning. These tokens will also be locked and unlocked according to a set schedule (e.g., locked for the first 6 months and gradually unlocked over the following year) to prevent mass selling immediately upon receipt and to reward investors who have long-term confidence in CatBomb.
- **Public Sale & Airdrop: 15% (150,000,000 tokens)** – Reserved for public token sales (e.g., through Launchpad) and community distribution via airdrop events. Tokens sold to the public may have partial unlocking (e.g., releasing 25-50% during TGE and the remainder over the following months), while tokens distributed via airdrop will follow

the previously mentioned conditions (30% during TGE and the remaining 70% after 3 months).

- **Project Treasury: 30% (300,000,000 tokens)** – Held by the project's treasury for future development and ecosystem expansion. These treasury tokens will be used for various plans such as developing new features, marketing, increasing trading liquidity, forming partnerships, or reserving for emergencies. The use of treasury tokens will be appropriate, and in the future, may be governed by the community through voting mechanisms as the project moves towards greater decentralization.

- **Rewards and Ecosystem: 30% (300,000,000 tokens)** – Allocated for in-game rewards, staking rewards, and activities to incentivize user engagement with the platform. These tokens will be used as rewards in CatBomb's Play-to-Earn and Play-to-Give systems, gradually distributed to players and the community throughout the game's lifespan (potentially spanning many years) to ensure sufficient tokens for long-term rewards without depleting too quickly.

This token allocation and unlocking plan ensures that no group holds an excessive proportion of tokens, and the unlocking schedule helps prevent immediate market dumping, maintaining price stability during the initial phase. The plan addresses both short-term needs (e.g., launch funding and initial rewards) and long-term needs (e.g., sustainable ecosystem development). All locking and unlocking processes are managed transparently through smart contracts, which the community can monitor via dashboards or blockchain explorers.

## NFT System & Cat Tiering

**CATBOMB** features an exciting loot box system for acquiring new cats, adding an element of luck and thrill to the gaming experience. When players start the game, they receive a random cat knight character loot box to begin playing. Players can also purchase CATBOMB loot boxes, which, when opened, provide a random NFT cat. The rarity level of the cat knight received is determined by predefined probabilities. For example, a standard box might have a high chance of yielding a Common cat but only a slim chance of obtaining a Mythical cat. This rarity mechanism ensures that truly rare cats remain difficult to obtain, enhancing their value and prestige.

The loot box rewards are governed by transparent smart contract logic (potentially using verifiable randomness on the blockchain) to ensure fairness. All players have equal chances, and the results cannot be tampered with. This thrilling loot

box experience not only increases player engagement and revenue but also channels the revenue back into the system according to the defined model (into prize funds, gold purchases, game development and marketing, and token burning). This aligns player spending with the overall development of the game's economy.

## Play-to-Charity Initiative

The unique concept of CatBomb is the Play-to-Charity philosophy, which elevates the Play-to-Earn gaming model by adding a social “giving” component. In practice, CatBomb dedicates a portion of its success and revenue to social activities and various foundations. The team's donation approach involves transparently and verifiably donating a portion of the company's net revenue to these organizations or foundations.

## Whale Tiers and Governance Rights

To empower the community and key stakeholders, **CATBOMB** will implement a Whale Tier system that groups major token holders (“Whales”) and grants them certain statuses and privileges. Token holders will be tiered based on the amount of \$CATBOMB they hold – for example, the top 1% of holders with the highest number of coins might be classified as the highest Whale tier. Each tier may have specific benefits such as special in-game bonuses, early access to new content, or increased voting power in the governance system.

The project plans to adopt a decentralized governance system, allowing all \$CATBOMB holders to vote on important proposals (such as game updates, fund allocation, or preferred charity projects for CATBOMB to undertake), giving the community a direct voice in project decisions. Major holders (Whales), due to their large coin holdings, will have significant influence in voting. However, this tiered system includes checks and balances to prevent any single Whale from dictating outcomes alone and encourages Whales to collaborate more with the broader community.

By aligning the incentives of Whales with the success of the ecosystem, CATBOMB's governance model aims to balance the voices of major and minor holders, promoting inclusive and sustainable game development.

# Roadmap (2025–2026)

**CATBOMB Development Roadmap** outlining key milestones and goals from 2025 to 2026:

- **Q1 2025:** Initiate the project and build the initial community. Officially launch the White Paper and start marketing to interested groups. Once there are players and profits, purchase XAUt (Tether Gold), a stablecoin backed by real gold, with 1 XAUt equivalent to 1 troy ounce of pure gold, to be used as a backup for CATBOMB tokens.
- **Q2 2025:** Launch of the \$CATBOMB token (initial offering/listing at 0.1 THB). Release the first set of NFT cats to early supporters (e.g., through pre-sale or airdrop). Begin alpha testing of the game (cat battle system, NFT creation) with a closed group of testers.
- **Q3 2025:** Beta launch of the CATBOMB game for public testing. Official launch of the NFT marketplace for cats. Start accumulating gold reserves from platform revenue and install a transparent dashboard to track the prize wallet and charity wallet balances.
- **Q4 2025:** Launch the game globally. Announce the first CATBOMB Gold Prize Tournament (beginning with the qualifying rounds), displaying the total prize pool on-chain in real-time. Conduct the first donation to charitable organizations from the company's net revenue, with publicly disclosed transfer proof. Initiate the token burn activities according to the specified revenue distribution model.
- **Q1 2026:** Host the inaugural CATBOMB Gold Prize Tournament, awarding winners funded by the community prize pool. Expand game content with new episode maps, cat characters, items, and new gameplay modes. Introduce initial governance features, allowing the community to vote on minor proposals to prepare for full decentralized governance.
- **Q2 2026:** List the \$CATBOMB token on additional exchanges to increase liquidity and accessibility for investors and players. Continue accumulating gold reserves; produce quarterly reports or audits on gold reserve quantities and charitable spending. Publish benefits for Whale tier holders within the game (e.g., special badges or exclusive content access for Whale members).
- **Q3 2026:** Fully activate decentralized governance. Token holders (including Whale members) begin voting on major game and fund allocation proposals. Integrate community feedback into ongoing development, and the team adjusts game balance based on player input.
- **Q4 2026:** Prepare for the second Gold Prize Tournament (expected to have an even larger prize pool). Summarize the first year of CATBOMB operations and publish a

comprehensive transparency report covering prize distribution, gold reserve status, and charitable donation outcomes. Plan the roadmap for 2027 and beyond based on community feedback and overall ecosystem stability.

## Technology

### TON Blockchain Ecosystem Deployment

In 2025, we chose TON as our platform due to its exclusive strategic partnership with Telegram, which boasts 900 million monthly active users. This partnership provided multiple straightforward integration entry points, including interconnected wallets, facilitating seamless interaction between the two platforms. Our decision to build on TON was driven by the platform's scalability and rapid community expansion, aligning perfectly with our vision of transitioning the user community to Web 3.0.

CATBOMB is committed to enhancing the TON ecosystem by encouraging the user community to adopt Web 3.0. Recognizing that the TON ecosystem has a strong foundation system and numerous partners, we saw an opportunity to leverage CATBOMB's strong community cohesion and user-friendly approach. CATBOMB is not only poised to attract more Telegram users to the TON ecosystem but also to act as a conduit connecting other Web3 ecosystems to TON. This commitment led us to collaborate with TON Network, further solidifying our role in the growth and improvement of the TON ecosystem.

CATBOMB is also considering applying the success of its operations to other blockchain ecosystems.

## Team

**CATBOMB** was developed and published by CATBOMB Team a Thai game development company with extensive experience in game development, focusing on Web 3.0 technology. With a development team of over 20 members, we would like to extend our special thanks to the following members of CATBOMB Developer for their contributions in making CATBOMB a part of Telegram on the TON Blockchain. They have transformed it into more than just a fun game, but a true NFT community within a thriving ecosystem.

## FAQ

Q: What does it mean that \$CATBOMB is a gold-backed token?

A: Being gold-backed means that a significant portion of CATBOMB's revenue (60%) is used to purchase real gold, which serves as a reserve supporting the token's value. This doesn't imply that each token can be directly redeemed for gold, but rather that the project's ecosystem holds gold assets (via the Lao Bullion Bank) to bolster confidence, reduce volatility, and provide tangible backing for \$CATBOMB. In essence, it adds an extra layer of stability and trust for holders, knowing that real-world assets partially support the token.

Q: How does CATBOMB ensure transparency and trust in its ecosystem (for example, in prize pools and gold reserves)?

A: CATBOMB maintains transparency by recording all key funds and processes on the blockchain. The prize pool wallet, charity wallet, and burn wallet are all public addresses that the community can view in real time. Likewise, information about gold reserve purchases (the 60% allocation) will be shared through regular reports or an online dashboard, so everyone can see how much gold has been accumulated. The smart contracts governing the prize distribution and token economics are open for audit, meaning the community or independent auditors can review the code to ensure everything operates as intended. By leveraging blockchain's public ledger and providing frequent updates, CATBOMB builds trust: players and investors can verify that the project is adhering to its promises regarding fund distribution, gold backing, and charitable contributions.

Q: How can we be sure that you actually donate the money after deducting expenses?

A: CATBOMB has implemented several measures to ensure transparency and credibility:

1. Use of Smart Contracts: Donations are controlled by transparent smart contracts, which can be verified on the blockchain. Everyone can view transactions and confirm that the money is sent to the actual charity address.
2. Transparent Dashboard: We have a dashboard that displays the charity wallet balance and donations in real-time, allowing users to track them at any time.

3. Third-Party Audits: We may use third-party audit services to verify donations and the correct use of funds.
4. Disclosure of Transfer Proof: Every donation will be accompanied by publicly disclosed transfer proof that can be verified.
5. Quarterly Reports: We will produce quarterly reports on donations and fund usage to keep the community continuously informed.

These measures ensure that the money after deducting expenses is genuinely donated and used for the intended purposes.
